# Third Party Cookies

How much ad revenue is based on cookies?

- a. \$100M
- b. \$1B
- c. \$90B
- d. \$1T

# First-Party Data Program

## 3<sup>rd</sup> Party Cookies = \$90B Problem\*

- Foundation for programmatic ads
- Google estimates 50-60% of revenue hinges on 3<sup>rd</sup> Party Data
- McKinsey estimates publishers could lose \$10B
- Chrome Browser = 66% Market Share
  - Apple & Firefox already deprecating

\*IAB, eMarketer, Statista

# Metadata Digital Dash Best Practices

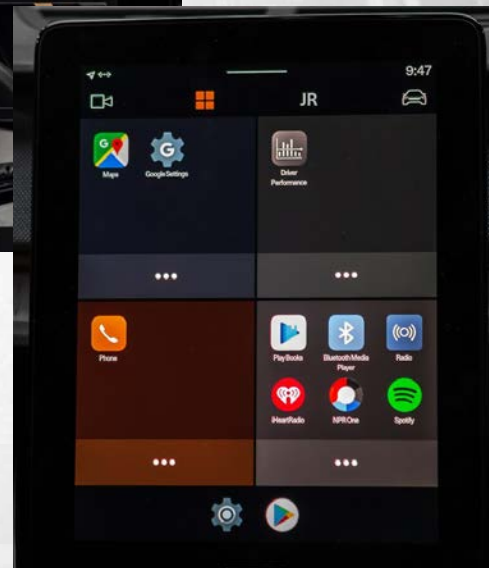

- Maximize your brand in the vehicle
- Provide superior user experience
- Earn new revenue
  - Services like QUU have advertising solutions

<https://www.nab.org/innovation/autoInitiative.asp>

# Android Automotive

- Android Automotive is the system that manages the automotive experience
- ABI research: 36 million vehicles will be shipped with Android Automotive in 2030
- Will be in vehicles from Ford, Audi, GM, Groupe PSA, Volvo, Renault, Nissan, Mitsubishi and others

# Initiative Participants

- Audacy
- Bauer Media
- BBC
- Beasley Media Group
- Commercial Radio Australia
- Cox Media Group
- iHeartMedia
- Ford Motor Company

**Should you share it?**

**WRONG**

This is a Facebook post from Gallup, a widely respected analytics company known for its public opinion polls. The post cites two findings in support of its claim and includes a link to a story with more details and context.

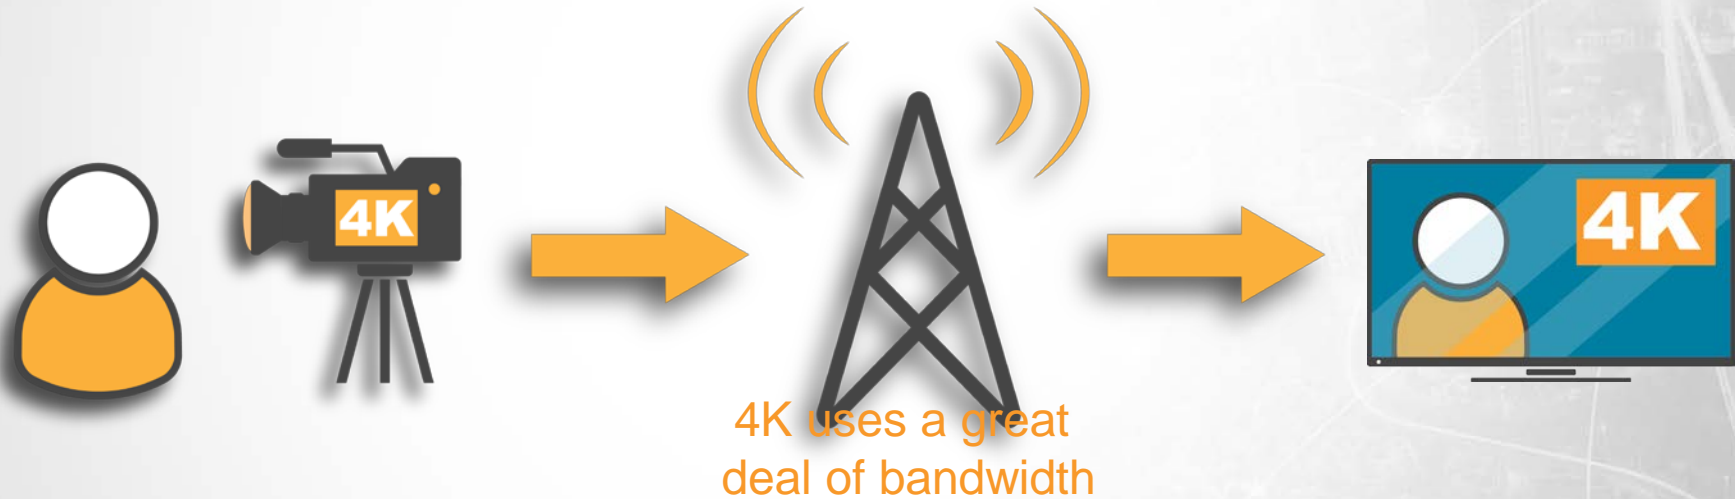

# SHVC Demo at NAB Show

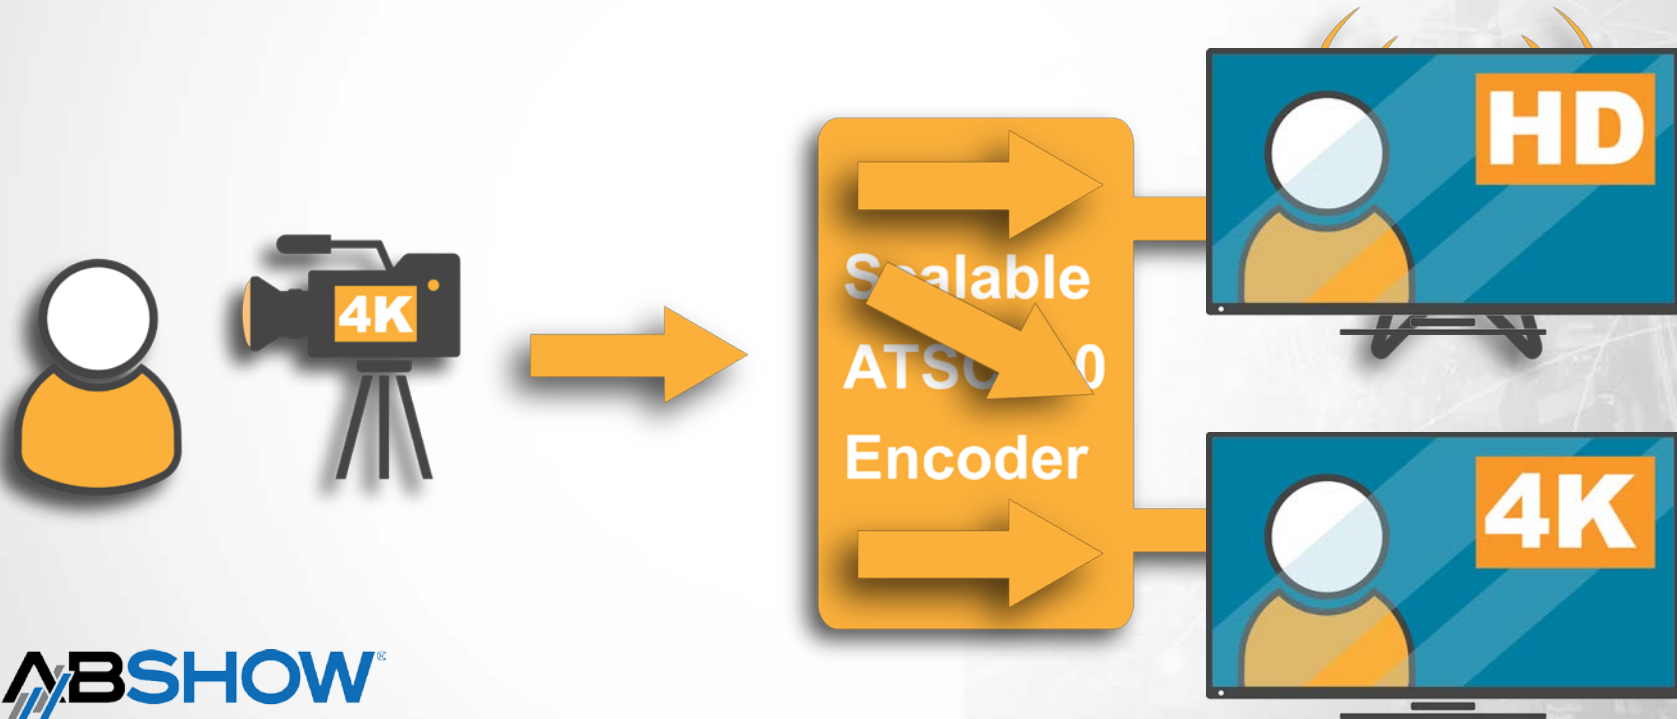

# UHD Broadcast

# Broadcast & Broadband

# RESOURCES

# NextGen TV TxID Table

- Tool to uniquely identify transmitters (FP & LP)
- IDs are regionally unique to channel number
- Excellent for SFNs where multiple transmitters will otherwise have the same physical layer attributes
- ATSC Standard has this as an optional field
- Multiple search options or CSV download

# ATSC 3 Security Authority

Signal Signing, App Signing and Content  
Encryption for ATSC 3.0 Broadcasts

# ATSC 3.0 - Brings Internet Security Features to OTA Broadcasts

The ATSC 3.0 standard provides three fundamental cyber-security features to protect broadcasters and viewers in this Internet age:

- **Signal signing** ensures the signal being received is from an FCC licensed broadcaster and that the information received has not been tampered with. Because 3.0 is essentially a broadband system, this authentication technology is derived from the TLS security (HTTPS) we experience on the Internet today.
- **Application signing** has the same purpose and uses the same authentication technology as signal signing, but applied to OTA-delivered applications. Applications must be signed by the author/developer and separately by any broadcaster transmitting the app OTA. Since applications frequently collect consumers' personal information as part of the sign-up process, it is especially important that consumers be able to trust their authenticity before installing them.
- **Content security** utilizes the same encryption technology used by Internet streaming services. Until now, OTA broadcasters have been at a disadvantage compared to cable & satellite operators, who can and do encrypt their signals to prevent signal and content theft.

# OTHER DATA OPPORTUNITIES

# RTK Datacasting – Enhanced GPS

# ATSC 3 – Broadcast Positioning System (BPS)

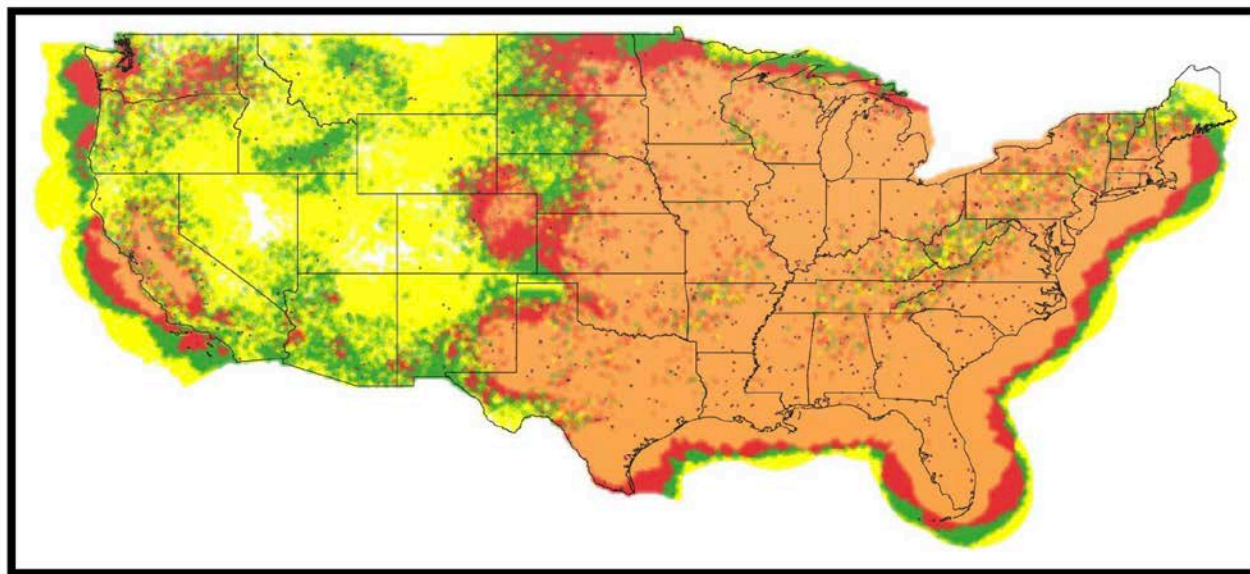

FIGURE 2: CONUS AREAS COVERED BY ONE OR MORE FULL-POWER UHF TV STATION WITH PLANNING FACTOR VALUES GIVEN IN TABLE 1. THE NUMBER OF STATIONS COVERING ARE INDICATED BY SHADING WITH YELLOW (1—3 STATIONS), GREEN (4—6), RED (7—10), AND ORANGE (11 OR GREATER).
